Art Unit: 1754

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5, 6 and 8 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Collier et al. Collier et al disclose a method of making a metal powder comprising activating particles of silicon nitride/silica or silicon nitride/alumina mixtures, and then mixing the activated particles with a solution of a reducible compound of ruthenium and reducing the ruthenium compound to the metal. See col. 6, lines 18-33.) The silica and/or alumina of Collier et al would inherently constitute a "secondary support" for the silicon nitride. In any event, it would be obvious to employ the alumina and/or silica as a support for the silicon nitride in the composition of Collier et al, since Collier et al teach that the silicon nitride should be in admixture with the alumina and/or silica, and it would be obvious to provide such admixture by providing the silica and/or alumina "on" the silicon nitride.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Collier et al. It would be obvious to include boron nitride as a refractory in the composition of Collier et al, since Collier et al teach at col. 1, lines 51-57 that the heat resistant material

may be made from any synthetic refractory, and it is well-known that boron nitride is a synthetic refractory.

Claims 1-4 are allowed

Jacobsen is made of record for disclosing the synthesis of ammonia with a catalyst comprising ruthenium supported on silicon nitride and/or boron nitride.

Rei et al is made of record for disclosing a boron nitride supported noble metal catalyst.
